The Routledge Handbook of Self-Determination and Secession explores the various debates surrounding the issues of self-determination and secession, and the legal, political, and normative implications they give rise to.

Offering a broad survey of the state of the sub-discipline today, the chapters are divided into seven key parts: an Introduction, Self-Determination, Explaining and Justifying Secession, Secession Strategies, Counter-Secession Strategies, International Law and Secession, and Constitutional Law and Secession. The authors, from a range of disciplinary backgrounds, explore all the recent approaches to secession and self-determination based on strategic interaction of major actors in a secession process.

This handbook will be of great interest to students and researchers from a variety of disciplines including politics and international relations, security studies, and law.

This Handbook expertly explores the profound transformations in international relations in recent decades. Proliferating cross-border challenges, including global financial crises, climate change, environmental degradation, irregular migration, and COVID-19, require governance structures that transcend the nation state and take both global and regional interplay, as well as problem-solving capacities, into account. Contributing authors investigate the effectiveness of international cooperation and performance in a diverse range of policy fields.

This collection of chapters tracks and explains the impact of the nine core United Nations human rights treaties in 20 selected countries, four from each of the five UN regions. Researchers based in each of these countries were responsible for the chapters, in which they assess the influence of the treaties and treaty body recommendations on legislation, policies, court decisions and practices. By covering the 20 years between July 1999 and June 2019, this book updates a study done 20 years ago.

The first comprehensive legal commentary on an international treaty governing conventional weapons for more than a decade. Describes use of anti-personnel mines by States and non-State actors through to the present, identifying States Parties that have violated the Convention. An authoritative interpretation of a treaty that resulted from years of campaigning by more than one thousand organisations worldwide.

This timely encyclopedia addresses the underrepresented scholarly state practice of the Asia-Pacific region in negotiating and implementing the United Nations Convention on the Law of the Sea (UNCLOS) – a continuing cornerstone of focus for regional and non-regional states alike. Further highlights for each represented state include ocean treaty accessions, domestic implementation, maritime zones, maritime disputes, exploring and exploiting living and non-living resources, marine environment protection, marine scientific research, dispute settlement, and contributions to the development of the law of the sea. The law of the sea is brought to life in the domestic laws, policies and institutions of states discussed.

This wholly new edition of the Handbook provides an authoritative examination of international law relating to the protection of the marine environment. Chapters critically engage with current legal issues surrounding activities that harm the marine environment, including marine pollution, seabed activities, exploitation of marine biodiversity and climate change, and with the different legal tools and mechanisms, including environmental impact assessments and compliance and dispute settlement mechanisms, used to protect the marine environment. New chapters also address legal issues relating to the role of technology and marine scientific research as well as the application of principles such as public participation.
