Now in its fifth edition, Diplomatic Law continues to be an essential guide to changing methods of modern diplomacy, providing an article-by-article commentary and placing each provision in context. The book highlights important new trends in the application of the Convention and provides comprehensive historical context and commentary on its application by the UK, the US, and other States. It explores the interaction between State and diplomatic immunity, examines methods of establishing and conducting diplomatic relations under conditions of physical danger, and looks at increased evidence of disregard for the rules of secrecy in diplomatic communications.

This book considers the complex and contradictory role of the United Nations when it comes to human rights around the world. It depicts the United Nations as a global arena in which state and non-state actors continuously contest issues around human rights. This ongoing contestation simultaneously produces both advances and setbacks when it comes to the rights of stateless populations, women, Indigenous peoples, and racialized people, as well as rights related to health and the environment.

The book's core argument effectively situates Economic Partnership Agreements in the 'systemic' asymmetry, which characterises the relationship between developed and developing countries in global trade. It applies the idea of asymmetry to the relationship between the core countries—the EU/USA and the peripheral countries (ACP)—in the GATT, multilaterally and in the EU-ACP trade relationship, bilaterally. The book identifies that core provisions in the WTO regime such as the special and differential treatment as well as GATT Article XXIV have not lived up to expectations. Underscoring the asymmetrical participation and dominant role of former colonial powers, the book demonstrates how, although trade is generally considered a catalyst for economic growth, developed countries have safeguarded their domestic markets while exerting pressure on developing countries to liberalise and compete.

The International Law of Economic Integration is a comprehensive reference work which builds a thorough understanding of the processes and consequences of economic integration and explores its essential role in shaping global economic policies and promoting international cooperation.

The book traces the historical developments and unpacks the theoretical foundations of economic integration, discussing contributions from notable political theorists and examining the impact of global crises and technological advancements. Through detailed, practical analysis it explains the existing rules and broad interplay of different regimes they work within, describes the range of legal instruments designed to facilitate the free movement of goods, services, capital, and labour across borders, and addresses the barriers posed by territorial nation-states to cross-border economic activities.

With contributions from worldwide leading scholars offering insights from the legal, economic, and political dimensions, this work provides a holistic exposition of the field, enabling effective negotiation of future rules and highlighting the path towards a more integrated and prosperous global economy.

This book provides critical legal analyses of latest developments in ocean law and policy by leading Asian legal scholars in the 5 years leading up to the 30th anniversary of the United Nations Convention on the Law of the Sea (UNCLOS) entering into force on 16 November 1994. The Asia's maritime domain, including both the Pacific and Indian Oceans, is currently facing a plethora of serious challenges, ranging from maritime and territorial disputes (especially in the South China Sea and East China Sea), competition between superpowers, piracy and armed robbery at sea, the degradation of marine environment, IUU fishing, to sea-level rising. This book allows readers to explore and understand how the scholars in the region examine, conceive, understand, and suggest solutions to these challenges.

2024 marked thirty years since the entry into force of the United Nations Convention on the Law of the Sea (UNCLOS). The process of adoption of UNCLOS and its influence on the development of the Law of the Sea are a good illustration of the important role that international organizations have played in contemporary international Law of the Sea, as they are the main producers of international norms. This book focuses on the role of the international (universal, regional, and subregional) organizations in the application of the provisions of UNCLOS and on how their legal orders have been veritable laboratories in which to test the scope of the provisions or rules of UNCLOS.

This book, finished in September 2023, addresses the fundamental principles enshrined in Resolution 2625 (XXV): sovereignty, the principle of non-intervention, the prohibition of the use of force, and self-determination. Studying these principles can help us understand some of the main features of international law and the international community in the 21st century: the role of traditional and new subjects alike; the sources of international law; issues of international responsibility; and new international challenges. For this purpose, the book analyses in each chapter the main controversial practices regarding principles. In addition, a section is devoted to an analysis of the particular relationship between the European Union and these principles, given the EU's unique role as an important evolution in international law as both a subject and treaty maker. Further, the EU provides an example of the institutionalisation of the international community and helps to solidify the concept.

This book delves into the integration of sustainability within the European Union's external activities, emphasizing the necessity to weave 'sustainability' throughout its relations with third states and international organizations. Unique in its approach, this collective work brings together a diverse range of experts, each contributing a chapter that explores different facets of sustainability in the context of the EU's increasing external actions. The pressing demands for sustainable development, as outlined in the EU Treaties—specifically Articles 3(5) and 21 of the TEU and Articles 11 and 191 of the TFEU—are examined through a compilation of theoretical analyses, legal dogmatic approaches, and detailed case studies. These contributions aim to offer a cohesive understanding of the legal implications and strategies for embedding sustainability into the EU's external engagements, providing a multidisciplinary perspective on a critical global issue.

This expansive Handbook compares the global, milieu, security, economic and societal systems of EU governance. It identifies the theoretical underpinnings and characteristics of each governance system and examines how these ensure public safety, social welfare, sustainability, and economic competitiveness. Leading experts in the field explore how policy domains, institutions and instruments have evolved, and assess the levels of policy competence between the EU and its member states. They analyse how the transformation of EU governance has been influenced by security threats and economic disequilibria that endanger individual civil liberties and prosperity. The Handbook also provides useful insight into the prevalence of multilevel governance within the EU, from local to global structures, and outlines how the conflicting preferences of member states can impede global governance.
